Axioms of Stocks & Options (A1)  
**Notebook 5: Moving Averages**

# Moving Averages

## Moving Averages:

- Moving Averages \_\_\_\_\_ the price data to form a trend following indicator
- \_\_\_\_\_ in trends give us some of the most profitable trades
- Institutional Investors & Mutual Fund Managers \_\_\_\_\_ moving averages

## Rule:

Since the primary purpose of the moving average is to “smooth” a securities price:

- They become exceptionally helpful during a \_\_\_\_\_
- Their use becomes entirely defunct during a \_\_\_\_\_ market

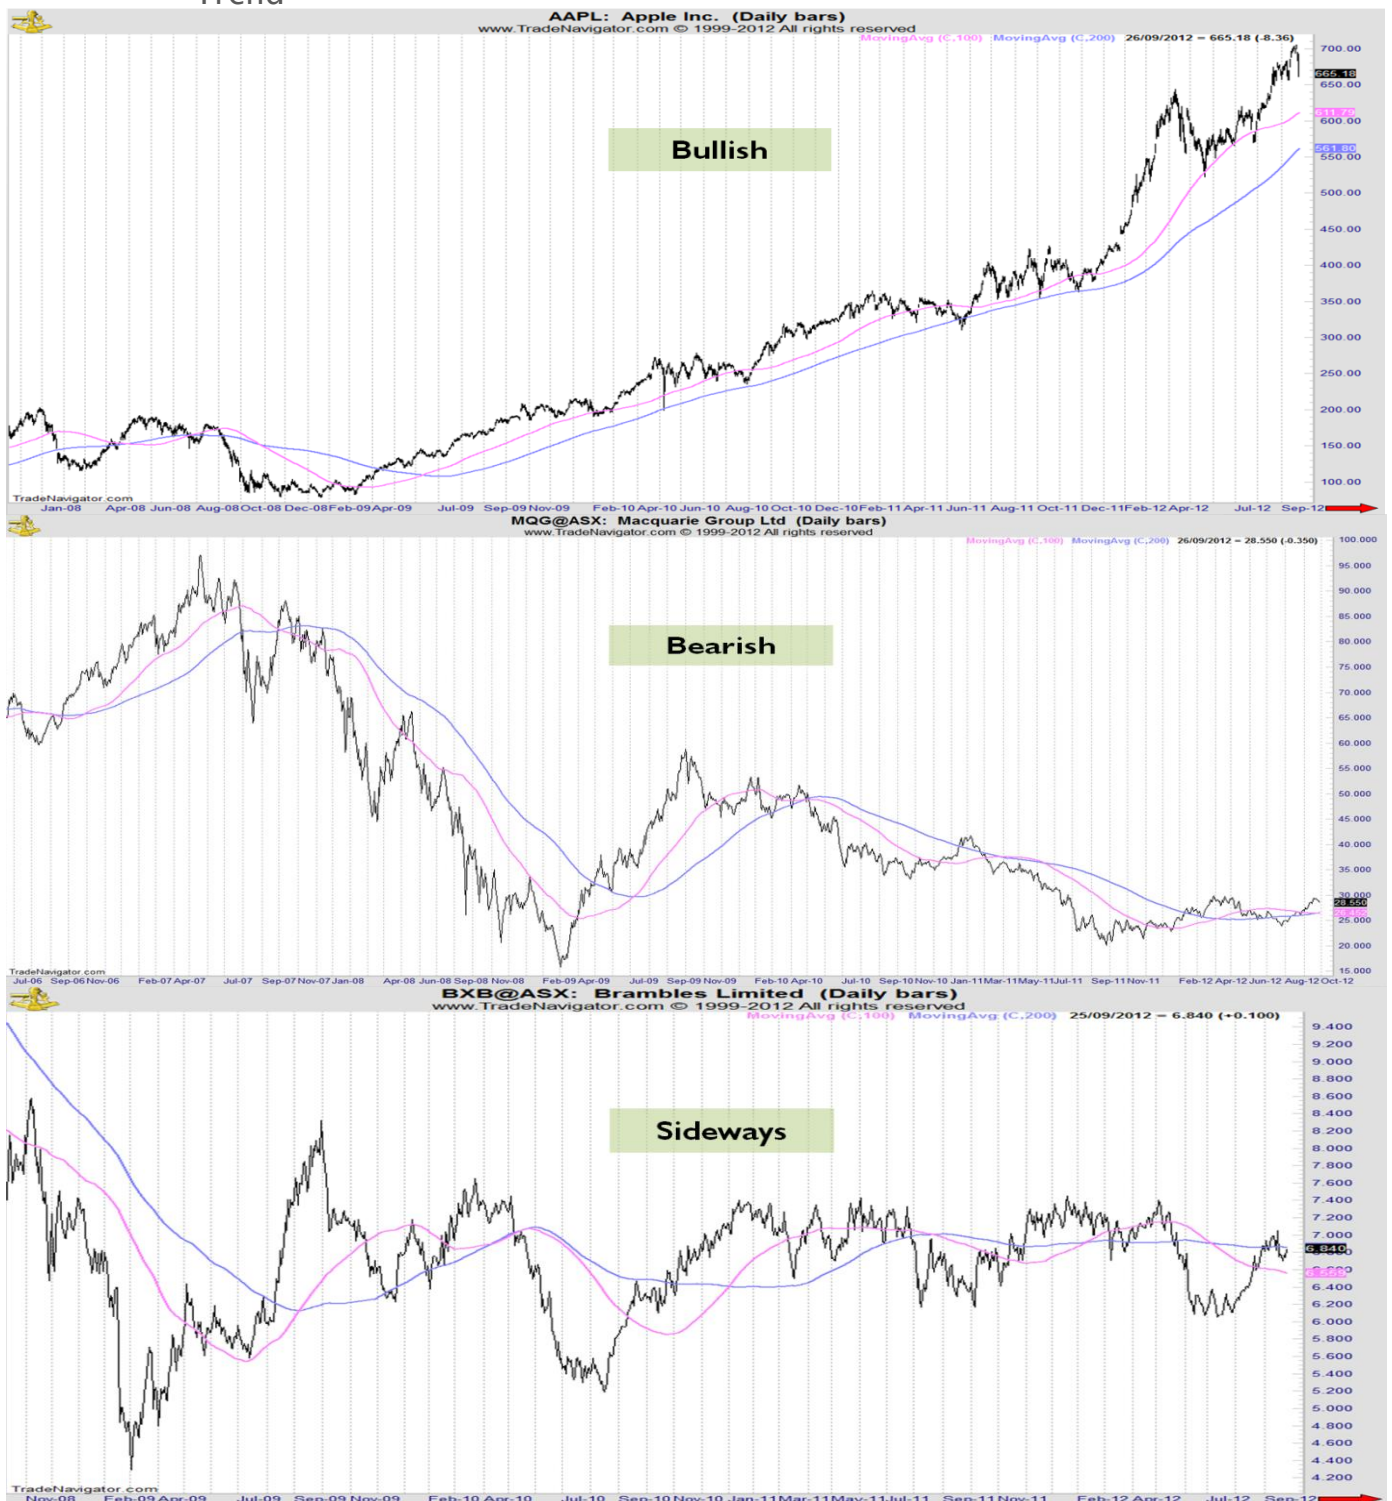

## Moving Average Categories:

1. \_\_\_\_\_ Moving Averages (SMA)
2. \_\_\_\_\_ Moving Averages (EMA)

## Simple Moving Average:

- Computes the \_\_\_\_\_ price of a security over a specified period of time
- Most useful for \_\_\_\_\_ long term trends
- Calculated over a \_\_\_\_\_ day & \_\_\_\_\_ day time period

- When the 100 is \_\_\_\_\_ the 200 we are in a uptrend
- When the 100 is \_\_\_\_\_ the 200 we are in a downtrend
- If the long term moving averages are continually crossing one another we are in a \_\_\_\_\_ market
- We use these two time periods \_\_\_\_\_ to establish the Long Term Trend

## Exponential Moving Average:

- Computes the \_\_\_\_\_ price of a security over a specified number of days
- A \_\_\_\_\_ weighting is given to the most recent closing prices in the calculation
- EMA's \_\_\_\_\_ the lag factor by applying more weight to recent prices
- EMA's are most useful for \_\_\_\_\_ short term trends
- \_\_\_\_EMA = 2 Weeks of daily closing prices
- \_\_\_\_EMA = 4 Weeks of daily closing prices
- \_\_\_\_ EMA = 10 Weeks of daily closing prices

## Pertinent uses of the Moving Averages

1. Establish Trend \_\_\_\_\_
2. Moving Average \_\_\_\_\_
3. \_\_\_\_\_ and Resistance

### 1. Trend Direction

- \_\_\_\_\_ Trend ( Price Above Averages)
- \_\_\_\_\_ Trend (Price Below Averages)
- \_\_\_\_\_ Trend (Price Through Averages)

### Moving Average Cross:

- \_\_\_\_\_ or more Moving Averages can be used to generate “Crossover Signals”
- Crossover Signals transpire when a \_\_\_\_\_ term moving average crosses over a \_\_\_\_\_ term moving average

### Moving Cross Strategy:

- When this occurs it indicates either a new \_\_\_\_\_ or \_\_\_\_\_ signal
- EMA's for \_\_\_\_\_ term trends (Swing Trades)
- SMA's for \_\_\_\_\_ term trends (Macro Picture)

- Bullish Trades: Moving averages will cross moving \_\_\_\_\_
- Bearish Trades: Moving Averages will cross moving \_\_\_\_\_

### Crossover Validity:

- Sideways consolidation in prices will give \_\_\_\_\_ crossover signals
- Must be a \_\_\_\_\_ angle to the trend. The steeper the angle the stronger the trend (Bullish or Bearish)
- We must look for strong \_\_\_\_\_ of the moving average lines

### Support and Resistance:

- Moving Averages work as \_\_\_\_\_ levels of support & resistance in a trend
- When price is trending above a moving average it will act as \_\_\_\_\_
- When price is trending below a moving average it will act as \_\_\_\_\_
- Most \_\_\_\_\_ when dealing with short term trends using EMA's

### Setting stops using MA's:

- Set stops on the \_\_\_\_\_ side of the moving averages when entering a new trend trade

### Moving Average Trend System:

- Trends provide the most \_\_\_\_\_ trading opportunities
- Moving averages allow traders to catch the \_\_\_\_\_, but not the entire trend

### Bullish Moving Average System Entry:

- When the MA's signal a bullish crossover, buy a \_\_\_\_\_ position
- Ensure that there is a \_\_\_\_\_ angle to the trend
- Strong \_\_\_\_\_ of the moving averages
- Wait for price to have \_\_\_\_\_ above all three averages

## Bearish Moving Average System Entry:

- When the MA's signal a bearish crossover, buy a \_\_\_\_\_ position
- Ensure that there is a \_\_\_\_\_ angle to the trend
- Strong \_\_\_\_\_ of the moving averages
- Wait for price to have \_\_\_\_\_ below all three averages

## Bullish Moving Average System Risk Criteria:

- Set a stop \_\_\_\_\_ the moving averages
- As the trend \_\_\_\_\_ adjust your stop higher to align with the new moving average level

## Bearish Moving Average System Risk Criteria:

- Set a stop \_\_\_\_\_ the moving averages
- As the trend continues adjust your stop \_\_\_\_\_ to align with the new moving average level

As you adjust your stop you will lock in your profits!

### Bullish & Bearish Moving Average System Exit Criteria:

- When the price moves above or below the moving averages you will be \_\_\_\_\_ out
- Exit the trade at a price \_\_\_\_\_
- Exit when the \_\_\_\_\_ begins to slow

### Moving Averages and Line Drawing:

- Without Support and Resistance analysis, we have no accurate \_\_\_\_\_ which illustrates logical targets for a securities price to reach
- When we \_\_\_\_\_ the two concepts of Line Drawing and Moving Averages, it generates superb trade setups
- Lines notify traders if \_\_\_\_\_ is nearing a resistance or support level, and also provides logical price targets in the future
- If an entry price \_\_\_\_\_ both Line and Moving Average Analysis, the probability of a profitable trade will increase

# Answer Key:

## **Moving Averages:**

- Smooth
- Participating
- Use

## **Moving Average Rule:**

- Trend
- Sideways

## **Moving Average Categories:**

- Simple
- Exponential

## **Simple Moving Average:**

- Closing
- Distinguishing
- 100, 200
- Above
- Below
- Sideways
- Mutually

## **Exponential Moving Average:**

- Closing
- Heavier
- Reduce
- Distinguishing
- 10
- 20

- 50

#### **Pertinent uses of the Moving Averages:**

- Direction
- Cross
- Support

#### **Trend Direction:**

- Bullish
- Bearish
- Sideways

#### **Moving Average Cross:**

- Two
- Short, Longer

#### **Moving Cross Strategy:**

- Buy, Sell
- Short
- Long
- Higher
- Lower

#### **Crossover Validity:**

- Misleading
- Steep
- Separation

#### **Support and Resistance**

- Floating
- Support
- Resistance

- Practical

### **Setting stops using MA's**

- Opposite

### **Moving Average Trending System:**

- Profitable
- Majority

### **Bullish Moving Average System Entry:**

- Long
- Steep
- Separation
- Closed

### **Bearish Moving Average System Entry:**

- Short
- Steep
- Separation
- Closed

### **Bullish Moving Average System Risk Criteria:**

- Below
- Continues

### **Bullish Moving Average System Risk Criteria:**

- Above
- Lower

### **Bullish & Bearish Moving Average System Exit Criteria:**

- Stopped
- Target
- Trend

## Moving Averages and Line Drawing

- Framework
- Combine
- Price
- Complements
